

Russia: how does El Niño generally affect seasonal rainfall?

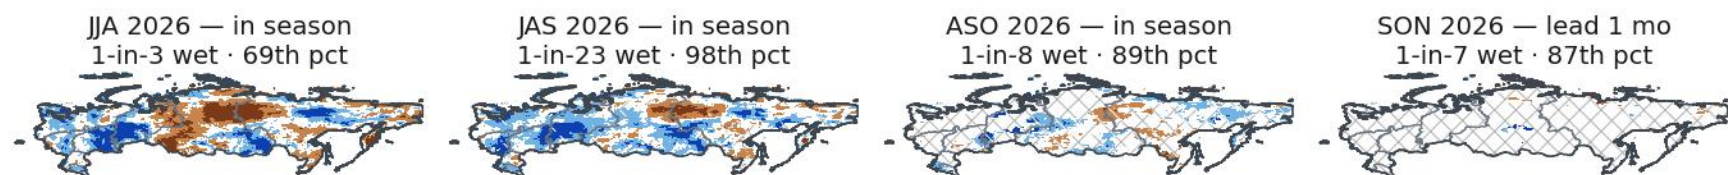

Pixelwise partial correlation of rainfall with Niño3.4 (ENSO), other climate modes held constant — ERA5 0.25° grid, 1981–2025

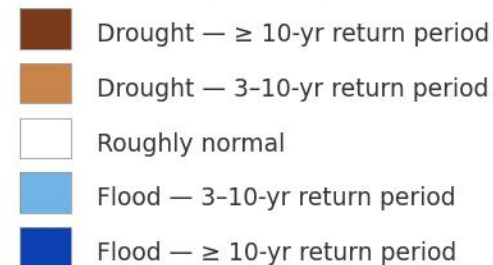

Data: ERA5 monthly precip (0.25°), NOAA PSL Niño3.4. Bottom row: the four quarters of the year. Distant territories beyond the map edge not shown.

Russia: what seasonal rainfall is predicted this year (August-issued forecast)?

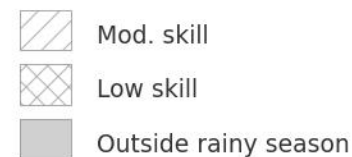

SEAS5 (issued August 2026) accounts for El Niño and every other driver · return-period categories vs the 1981–2025 hindcast · skill-shaded · ADM1

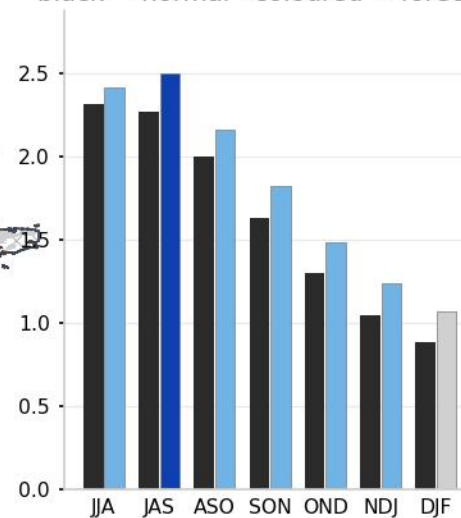

Forecast (high skill):

Other:

Country-mean rainfall (mm/day)
black = normal · coloured = forecast

White hatch on a colour = moderate skill.
Tile subtitles: the country-level return period and percentile from the alerts app.
In season = observed months + forecast.
Niño3.4: +1.7 °C in Jul 2026.

Data: ECMWF SEAS5 · Boundaries: RUS ADM1 (COD)
