

Papua New Guinea — ERA5 rainfall × ENSO teleconnection

Pixelwise Pearson correlation of trimester rainfall with Niño3.4, ERA5 native 0.25° grid, 1981–2025

Peak ENSO signal — strongest significant trimester per pixel

Papua New Guinea — current SEAS5 seasonal forecast

Issued August 2026 · ensemble-mean trimester rainfall as a percentile of the same-issuance SEAS5 hindcast (1981–2025) · native 0.4° grid · ADM1 boundaries

SON 2026 — lead 1 mo — country mean 6th pct ← driest overall OND 2026 — lead 2 mo — country mean 16th pct

Forecast percentile vs climatology

NDJ 2026/27 — lead 3 mo — country mean 48th pct

DJF 2026/27 — lead 4 mo — country mean 64th pct

One tile per upcoming trimester fully covered by this issuance (leads 1–4). Percentile is computed per pixel against the same issued month and leads in the SEAS5 hindcast, so model bias cancels.

Driest outlook overall: SON 2026 (country mean 6th percentile). Niño3.4 anomaly: +1.7 °C in Jul 2026.

Data: ECMWF SEAS5 (ensemble-mean monthly precipitation). Boundaries: PNG ADM1 (COD).
