

Papua New Guinea — ERA5 rainfall × ENSO teleconnection

Pixelwise partial correlation of trimester rainfall with Niño3.4 — the other climate modes held constant — ERA5 0.25° grid, 1981–2025

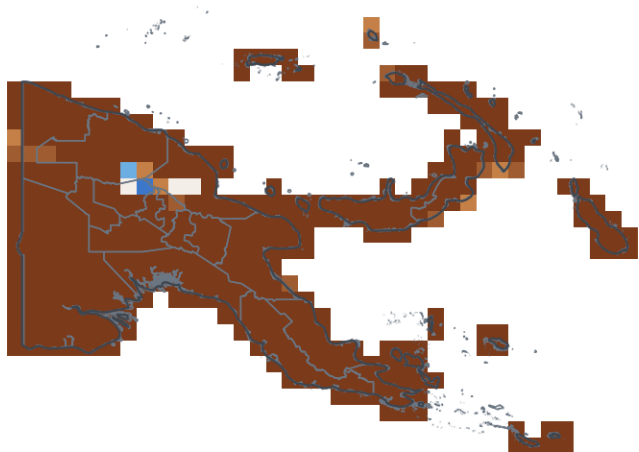

Unique ENSO signal — strongest significant trimester per pixel

Papua New Guinea — current SEAS5 seasonal forecast

Issued August 2026 · ensemble-mean trimester rainfall as a percentile of the same-issuance SEAS5 hindcast (1981–2025) · native 0.4° grid · ADM1 boundaries

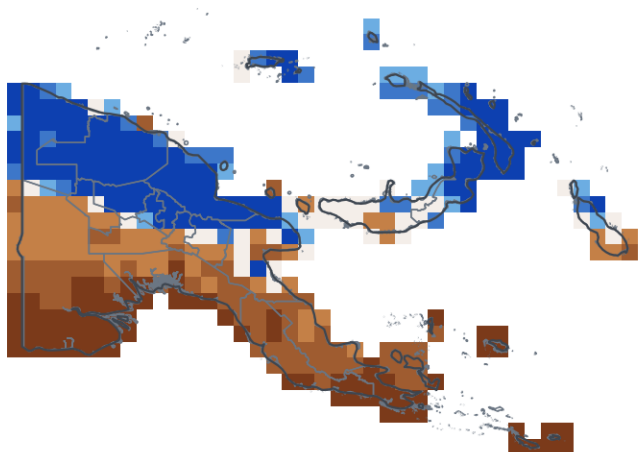

SON 2026 — lead 1 mo — mean 6th pct ← driest overall

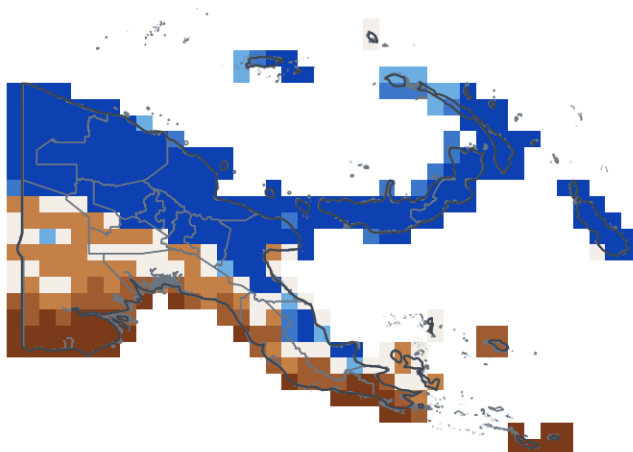

OND 2026 — lead 2 mo — mean 16th pct

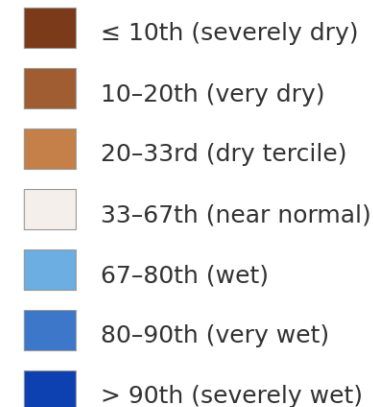

NDJ 2026/27 — lead 3 mo — mean 48th pct

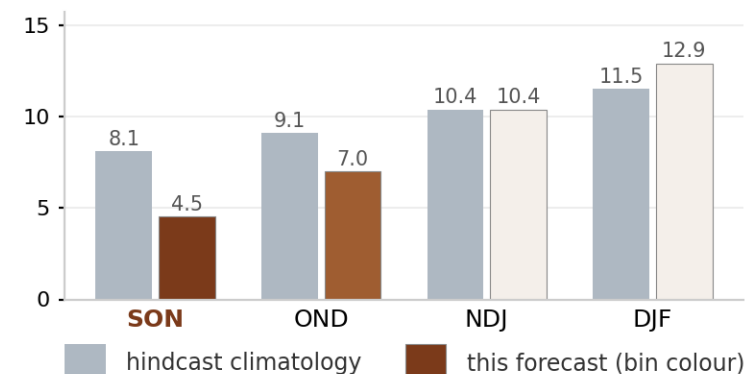

DJF 2026/27 — lead 4 mo — mean 64th pct

Forecast percentile vs climatology

Country-mean rainfall (mm/day)

Percentile per pixel vs the same issued month and leads in the hindcast, so model bias cancels. Driest outlook: SON 2026 (mean 6th pct). Niño3.4: +1.7 °C in Jul 2026.

Data: ECMWF SEAS5 (ensemble-mean monthly precipitation). Boundaries: PNG ADM1 (COD).
